1. The first step in the process of disaggregating interpersonal violence is to identify the different forms of violence that are being experienced. This can be done by looking at the different types of violence that are being used, such as physical, sexual, and emotional violence. It is also important to consider the different contexts in which the violence is occurring, such as in the home, at work, or in public places.

Disaggregating Interpersonal Violence

2. The second step in the process of disaggregating interpersonal violence is to identify the different causes of the violence. This can be done by looking at the different factors that are contributing to the violence, such as individual, social, and cultural factors. It is also important to consider the different consequences of the violence, such as physical, emotional, and social consequences.
